

400 VAC PANELS:

In a market with growing numbers of servers, and also servers with higher power consumption than before, Duelco sees a market for 400 VAC panels.

400 VAC Panels are available in various configurations both for PWR power panels, but also for Amp-meter panels. Duelco has 400 VAC panels with 10 / 13 or 16 Amp. outlets for both IEC 320 solutions, but also for national outlets. (Depending on national law, the current can be limited).

A special panel for the 400 VAC series is Duelco's new BPP Blade power panel, which is unique and compact in its construction.

The new BPP Blade power panel is based in a separated individual power/current protection on each outlet. For the BPP Blade power panel all outlet types IEC 320 C13/ C19, also with national outlets are now available.

CUSTOMIZED SOLUTIONS:

Duelco is specialized in panel production fully according to customer requirements. If you have the application, give us a call or e-mail, and we would be happy to give you the best and fastest solution.

The few solutions here shown are just a taste of our activities within this area. We also make power saving panels, TV Panels, PDCR Power & Data Connection Rulers, PLP Power Loading Panels with time diversification on the switching-on mode.

Duelco

POWER PANELS

Duelco A/S is a Danish company that develops and delivers system solutions for power panels and power distribution. Our solutions are based on various types of power outlets, installed in aluminum profiles, alternatively combined with electronic devices such as digital power Amp-meters etc.

Duelco is very flexible and oriented toward customer's solutions.

The compact way of installing electrical equipment and IT solutions today has increased the demand for more power outlets in the installation. The Duelco panels are based on our elegant aluminum profile, in which all the electrical equipment are mounted.

PWR POWER PANELS:

Duelco offers various solutions for power outlets, for various countries. Denmark, United Kingdom, United States, France, Switzerland, Europe with the Schuko etc. PWR Power Panels with national outlets can be mounted with up to 9 outlets suitable for 19" mounting. All PWR Power Panels are available with on/off switch and/or a glow lamp for indication.

This product range is very compact in its construction. A special area of PWR power panels is our electrical power panels with IEC 320 outlets, suitable for 19" support. Duelco can offer you a various series of IEC solutions, also a combination with IEC 320 C13 and C19. Due to the compact design we are able to install 16 x IEC 320 C13 in a 19" power panel, or 12 x IEC 320 C19 in a 19" power panel.

DIGITAL AMP-METER SOLUTION:

Servers are getting smaller and smaller, and therefore the numbers of servers installed in a data rack are also growing. Due to this fact the correct power distribution in the server rack becomes a major requirement. To ensure that start-currents do not exceed the rating of the pre-fuses, Duelco has developed a number of digital power Amp-meters to monitor the installed current level. The digital current meter = Amp-meter has 3 digits. The solution can be mounted together with outlets from the IEC 320, C13 / C19 / Schuko or other national outlets, or a combination of the different outlets.

TYPICAL CONFIGURATIONS:

8 x IEC 320 C13 + 1 Digital Amp-meter.
10 x IEC 320 C13 + 1 Digital Amp-meter.
12 x IEC 320 C13 + 1 Digital Amp-meter.

10 x IEC 320 C13 + 1 x IEC 320 C19 + 1 Digital Amp-meter.
6 x (National outlets) + 1 Digital Amp-meter.
