MEDICO solutions

Values for the future

Since the company was founded in 1974, Duelco has focused unwaveringly on delivering service, products and specialist technological solutions of the highest quality. On the basis of values such as skill, dynamism, innovation and honesty, we ensure that we are an excellent partner for our customers.

What started as a good idea combined with the goal of being the preferred partner and supplier of products and skills in the field of electrical and automation equipment has developed into a vision of being the provider which, through its concept and work methodology, will convince customers that we have the best solution in both the short and the long term. This vision has allowed Duelco to continue as a dynamic company distinguished by healthy development, which has resulted – for example – in the company winning the Danish newspaper Børsen's Gazelle Prize and receiving a AAA rating from D&B.

Duelco has specialised in customer-specific or customised solutions featuring a high level of know-how that stems from many years' experience and the input of skilled and committed staff. The combination of no-compromise quality and innovative thinking adds value and helps create unique solutions. We call this "Excellent solutions".

Through Medico Solutions, we are focusing on the welfare technology of the future for hospitals and the healthcare sector. When you make large and important investments, it is important to ensure that the solutions also generate gains in efficiency so that more time can be devoted to care and attention to help patients feel more secure. Duelco provides future-proof solutions where both users and patients experience a significant difference – with benefits. In spring 2010, Duelco was awarded a 3-year welfare technology contract with National Procurement Ltd. – Denmark, centred on patient call systems and patient terminals.

**Commitment x knowledge x
creativity = Excellent solutions**

Nothing happens on its own. We at Duelco encourage our staff to think outside the box. This leads to better solutions and more satisfied users.

1 - Rounded shelf – possibly with built-in light

2 - 45 mm channel for 230 V AC sockets

3 - 45 mm channel for computer/low voltage connection

4 - 45 mm channel for fixed guide rail

5 - Air/gas - note the angled socket

Duelco has solved the challenge linked to the need for larger and more spacious ward panels for the hospital and care facilities of the future. Quite simply, we have made them smaller.

Whereas others are limited to using 80 mm modules, we – as the only supplier – provide 45 mm modules. This practical and elegant solution allows space for more tracks in the panel, so 230 volt cables and the essential data communication connections can be run through separate channels without any risk of interference effects. Safety is the Alpha and Omega.

A third channel contains an integrated suspension guide that runs the entire length of the panel, while the bottom channel is reserved for air and medical gases. To minimise the load and thus the risk of leaks from the tubes, the valves are angled downwards. A simple but effective detail - just like the gently curved design of the panel, which provides improved surface hygiene.

Attractive lines and functional details

Stability in motion

Duelco helps to ensure that everything is within easy reach – without getting in the way. The technical equipment is positioned in a logical and straightforward layout, with access from multiple sides. This helps ensure order, structure and elbow room.

Our range of intensive care columns is distinguished by a high level of flexibility and ergonomic design, with superior stability in all positions. The French manufacturer is considered to be a world leader in the field of quality equipment for the hospital sector.

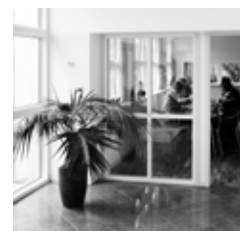

The range comprises floor-mounted columns, suspended columns, mobile columns and bridge systems, and the solutions can be either operated manually or motorised to facilitate operation.

The columns can be fitted with shelves, drawers, hooks, technical equipment and units to match customer requirements. We stock a broad and deep standard range that covers the vast majority of needs. In addition, the columns can be fitted with electrical and data sockets, electronic control, operating panels, medical gases, etc. as required.

The no-compromise design and choice of materials makes the columns extremely hygienic and easy to clean. For example, all components are fitted flush with the surface to eliminate critical edges – an expression of the manufacturer's focus on even the smallest details.
